

## Group 1

### Part 0 - Instructions

To unpack the jar file run the command `"jar xf part0.jar"`.

To run the assembler, you must call the test case in `test0.java`. This can be done on the jar using the command `"java -cp part0.jar test0"`. This can also be done on the unpacked files using the command `"java test0"`.

A test case for the assembler is provided in `/testFiles/test0_1` where `test.asm` is the input and `expectedListing.txt` is the copy of the expected listing file for the test case.
